I compile all the input files that we were given and I get the difference in between ZReports. In the given output files we were asked to sort them into the order of their setSwitchTimes but I couldn't sort it into that order. Instead, while I add objects one by one to devFeature object list ,I sorted ZReport by object's indexes. So there is a sort difference.Also I couldn't find if we can get two same device that will be switched by using setSwitchTime command.By that I mean if there are commands like this;

SetSwitchTime plug1 2023-03-09_14:00:00

SetSwitchTime plug1 2023-03-09_14:00:05

It can switch its status one by one for example if commands are like this:

SetSwitchTime plug1 2023-03-09_14:00:00

Nop

SetSwitchTime plug1 2023-03-09_14:00:05

In this case it will work correctly but if the situation is like the first one it won't work correctly.
